Monroe, WA

**EXPERTISE** Air Barrier and Window Water Testing  
Project Scheduling & Logistics  
Employee Training

### PROFESSIONAL SUMMARY

Mr. Johnson joined the team at BEE Consulting, LLC in April of 2016 as a Project Inspector. He serves as a project field inspector in regards to building envelope waterproofing. Part of his duties in this role consist of building envelope air leakage diagnostics by mechanical fan pressurization utilizing theatrical smoke, and/or infrared thermography. Other duties include completing testing reports, inspection reports, and supervising and training newer technicians. His ability to adapt to the needs and schedules of our clients is a key component to his success in this envelope inspection role. Mr. Johnson is very proficient at communicating the details of his inspections to both the client and the Project Manager on the job. His skills prove his value as a key member of Bee's Field Services Team.

Prior to working at BEE, Mr. Johnson was a construction worker with MKB Constructors/Derian, Inc. for a year and a half. During this time, he utilized his carpentry skills in the installation of conveyors, waste water screen demolition, installing upgrade machinery, and operating heavy equipment such as cranes, forklifts, and jackhammers.

Mr. Johnson spent eleven years at William Scottsman as their Construction Set-up Lead. He supervised construction crews during the tear-down, set-up, and relocation of modular and mobile building structures. He also assembled permanent and temporary foundations, performed mobile crane rigging, operated remote control heavy equipment, and constructed multi-story and multi-unit modular structures for schools, hospitals, construction sites, and the military.
